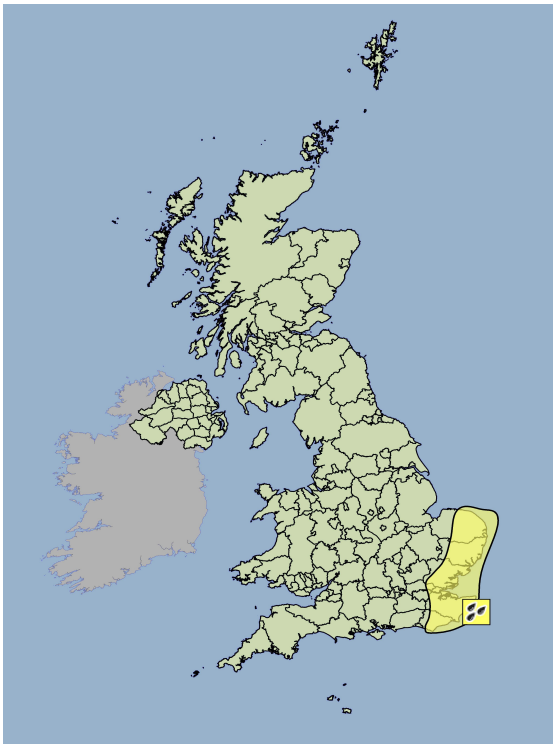
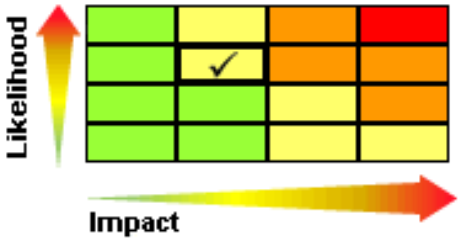
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure is expected to develop across the southern North Sea on Sunday, bringing a band of rainfall southwestwards across southeast England and East Anglia. 20mm may fall quite widely, but embedded within this there is the potential for some localised heavier bursts which could produce 40-50mm. There is a high degree of uncertainty over the depth and track of the low, and hence also on the locations most likely to be affected by the larger rainfall totals, so the public are advised to remain in touch with the forecasts.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Sun, 13th Oct 2013** until **23:59 on Sun, 13th Oct 2013**

Outbreaks of rain are expected to affect southeast England and East Anglia during Sunday, heavy in places. The public should be aware of the potential for localised flooding.
